## PUBLICATION SCHEDULES

Expana assesses its Expana Benchmark Prices (EBP) from a variety of locations, and therefore the publication schedule (including assessment timestamps) varies depending on the schedule applied. The EBP assessments in the specifications guide represent the value of a given commodity timestamped against the below times of day:

**EMEA:** 16:00 UK time

**Americas:** 16:00 Eastern time

This information is annotated in this guide next to each EBP assessment under "Publication Schedule". For full details of bank holidays and early closes, please consult the Expana Assessment Methodology Guide which can be found at <https://www.expanaglobal.com/our-methodology>.

This guide is up-to-date as at the time of publication, and notes of any material changes Expana makes to the guide is recorded the Revision History section at the end of the document. Details of changes and clarifications of assessment specifications are communicated to the market and can be found on the Market Notes webpage at <https://www.Expanaglobal.com/marketnotes>.

Incoterms, the basis delivery or loading location, will be defined by the EBP as part of its assessment specification. In the case of the Americas schedule, the Uniform Commercial Code (UCC)

\* European Deadweight Pork Grades S & E

Assessments BW56 and BW19 use a basket of underlying Expana Benchmark Prices from different European pork-producing countries, combined with a calculation that takes pork production statistics (in tonnes) of each of those countries, and applies a weighting. Countries taken into consideration for the European EBP are Germany, Spain, France and Poland. The weighting used is based upon pig slaughter statistics published by the European Commission, in tonnes, which can be accessed [here](#).

For each assessment of BW56 and BW19, Expana takes a fixed 3-year average of the slaughtering data from September 2018 to August 2021 inclusive, and calculates the percentage share for each country which is considered for the assessment. The weightings that are used are as follows: Germany (36.31%), Spain (34.19%), France (15.48%), and Poland (14.02%). Expana reserves the right to reassess and update these weightings as the market deems necessary.

The assessment for European Union Grade S [BW56] uses series BW31 for Germany, BW59 for Spain, BW33 for France, and BW40 for Poland, weighted as above. The assessment for European Union Grade E [BW19] uses series BW04 for Germany, BW06 for Spain, BW07 for France, and BW14 for Poland, weighted as above.

The assessments will be rounded to the nearest Euro cents using the rule that decimals of four (4) or less round down, and decimals of five (5) or above round up, e.g. €1.344 would be rounded to €1.34, and €1.345 would be rounded to €1.35.

\*European Compound Feed Indices

The European compound feed assessments use a basket of underlying Expana Benchmark Prices for European grains and oilseed meals weighted by representative inclusion rates for compound feed production.

The weightings and Expana Benchmark Prices included are as follows:

**Pork Compound Feed Index Europe [PCI1]:** Feed wheat 35.5% [Expana Code: AG11], Maize 21.5% [Expana Code: PK51], Soymeal 21.5% [Expana Code: SMFR], Feed barley 21.5% [Expana Code: AG14]

**Chicken Compound Feed Index Europe [CCI2]:** 10.0% Feed wheat [Expana Code: AG11], 50.0% Maize [Expana Code: PK51], 30.0% Soymeal [Expana Code: SMFR], 10.0% Rapeseed meal [Expana Code: AG19]

The assessments are rounded to the nearest Euro cents using the rule that decimals of four (4) or less round down, and decimals of five (5) or above round up, e.g. €1.344 would be rounded to €1.34, and €1.345 would be rounded to €1.35.

**\*European Olive Oil Indices**

The index assessments use a basket of underlying Expana Benchmark Prices from different European olive oil-producing countries, combined with a calculation that takes olive oil production statistics (in tonnes) of each of those countries and applies a weighting.

Countries taken into consideration for the European olive oil indices are Spain, Greece and Italy. The weighting is based on a fixed 5-season average (2017/18 to 2021/22) for olive oil production. The production statistics are published by the European Commission and can be accessed [here](#).

The weightings are as follows: Spain 70.98%, Greece 13.21% and Italy 15.81%. The assessment for the conventional extra virgin olive oil index (OOEU1) uses series JG23 for Spain, WJ43 for Italy and OO15 for Greece, weighted as above. The assessment of the organic extra virgin olive oil index (OOEU2) uses series OOOG for Greece, OOOI for Italy and OOOS for Spain, weighted as above.

The assessments are rounded to the nearest Euro cent using the rule that decimals of four (4) or less round down, and decimals of five (5) or above round up, e.g. €1.744 will be rounded to €1.74, and €1.745 will be rounded to €1.75.
