SUPPORTED SCREEN SIZES

Large desktop - 1920 x 1080

Small Desktop - 1366 x 768

This document provides information about the new/improved features, enhancements, and production bug fixes delivered in the Mintec Analytics v4.5.1 and v4.5.2 releases.

What's Changed

Mintec Analytics v4.5.1

New Forecasts:

- Four new forecasts released into the platform
    - Cheese EU
    - Cheese US
    - Kraftliner US
    - Milk Power WMP US

    The existing Milk Powder WMP forecast has been renamed to Milk Powder WMP NZ.

Improvements:

- The futures series, when graphed, will show DH-0 as default instead of DH-3.

    Note: Client users who have graphed both DH-0 & DH-3 on their dashboards will not have any impact.

Bug Fixes:

- BUG #1: Cannot edit the Budget/Trend price analysis when selecting futures series with DH-0. This is fixed.

- BUG #2: The published model is NOT updated when the user edits the model code and name

- BUG#3: When the user clicks on the Hedging recommendation's [help] icon in the Forecast details subtab the system was not responsive. This is fixed.
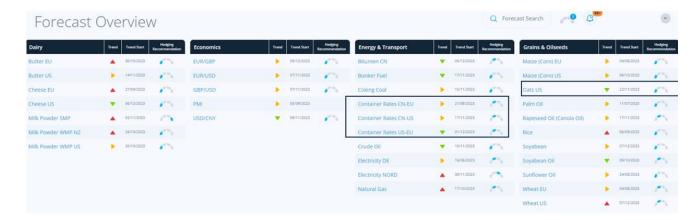

Mintec Analytics v4.5.2

New forecast release:

3 new forecasts released into the platform:
    - Oats US
    - Container Rates CN-US
    - Container Rates US-EU

Name change - Container Rates -> Container Rates CN-EU

Improvements:

- [Forecast] Export realised targets to MS Excel. This change is only on when downloading data via the web app.
- [Forecast] Hedging recommendation history dropdown to show the exact date instead of MON/YYYY.
- [Forecast] It is possible to download from all the Forecast sub tabs.

Bug Fixes:

- BUG #1: Showing the video icon on the chart when there are no weekly digest videos (e.g. PMI)
- BUG #2: Forecast Cost Drivers subtab: Some Fig shows incorrect data on the Excel file (e.g. BUTH, NFD2). This has been resolved.
- BUG #3: Overlapping target box on the line (e.g. HRCN)
